EnergyQuest™

Advanced Thermal Performance Vinyl Window System

Exceed Your Expectations: Today And In The Future

Why Choose Glass-Rite Energy Quest™ Windows?

Our Energy Quest™ windows were designed to be **30% more efficient** than what is required by (already strict) Energy Star standards.

**Energy Efficient & Cost Savings** Over our 40+ years in business, Energy Quest™ windows have helped to significantly reduce the use of fossil fuels, resulting in less CO2 released in the atmosphere. Further, using less energy to warm or cool your home results in more energy cost savings for you!

**Quality Production** Energy Quest™ windows are made to commercial standards with integral metal reinforcement in each sash providing added security and lower air infiltration. Our uniquely engineered flush fin incorporates an internal drainage system designed to eliminate water leaks (think Monsoon season!). Lastly, the vinyl extrusions used for the Energy Quest™ window line are made in the USA and have a smoother finish than other vinyl, meaning less exposed surface area, less weathering, and easier clean-up (no need to ever paint or touch up).

**Local = Better Service, Better Product, Lower Costs** Using a local manufacturer means a quicker turnaround, direct access to our service team, glass sealed at our unique altitude, and a window that is designed for the variable New Mexico climate. Lastly, buying direct from the manufacturer cuts out third party costs, meaning lower prices for you!

**Professional Installation** Energy Quest™ windows can be installed by the homeowner, a contractor, or by the professionals at Glass-Rite. Glass-Rite has developed specific installation methods for New Mexico's unique construction & architecture to insure correct window operation & protection from air and water leaks. Glass-Rite is an EPA Lead-Safe certified company that uses lead-safe paint practices on any homes built before 1978.

Glass-Rite was founded in Albuquerque in 1984 on the premise of supplying quality products and installation at everyday low prices.

We are family-owned and pride ourselves on our reputation for great service.

As Glass Rite received the 2018 New Mexico Business in Ethics award, we strive to continually offer ethical, outstanding service to our customers.

EnergyQuest™

Advanced Thermal Performance Vinyl Window System

Energy Quest™ Features

Super Spacer Dual-Seal Technology

We use Guardian ClimaGuard 62/27 and IS20 Glass. This glass is a "soft-coat" Low-E glass with a very low U-Value, which means higher performance. **Our products block 93% of UV radiation to protect in-home fabrics & carpet from fading, while also providing glare control.**

Reinforced Security Locking

Standard Slim-line Cam-Locks:

- Color-matched to vinyl frame color
- Locks are attached through multiple walls of vinyl and are screwed directly to metal reinforcement for strength
- & security

Two locks on all windows over 30 inches

Energy Saving

Our insulated glass units use a Non-metallic Super Spacer which provides both a double seal and a continuous non-permeable Mylar backing. The Super Spacer system is best in-class for Argon retention, increasing window efficiency. This helps to keep your home cool in the Summer and warm in the Winters.
